

Your little builder is about to become a scissor master!

Cutting practice turned into a real construction project. Kids start with easy snips and move step by step to straight roads, zigzags, waves, shapes, and finally cut-and-glue projects where they build their own dump truck, excavator and building.

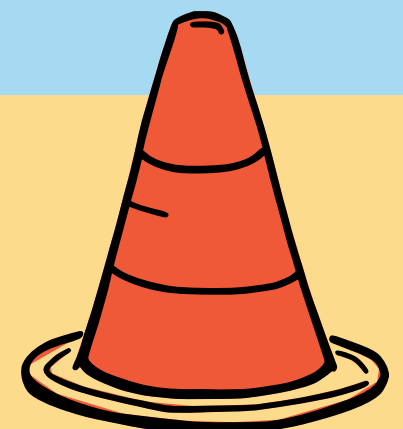

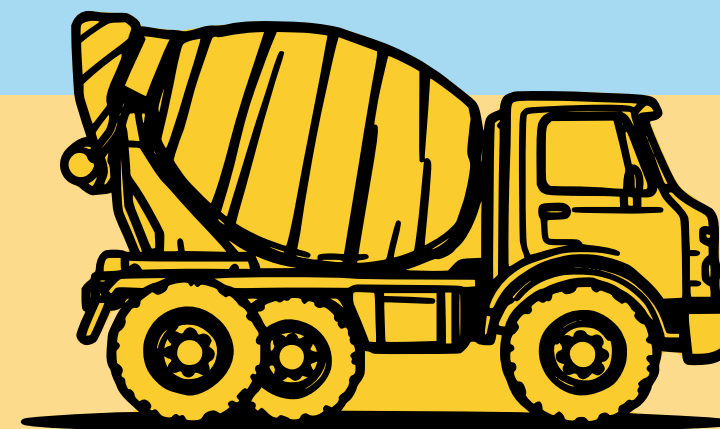

- 35 cutting activities across 5 levels
- Big, bold trucks, diggers and cranes to color
- Single-sided pages, so cutting one never ruins the next
- An easy tear-out line on every page
- A Scissor Master certificate at the end

Use with child-safe scissors and adult supervision.
